3. Write a Pandas program to display the details of jobs in descending sequence on job Title.

Aim:

To write a Pandas program to display the job details in descending order based on job title.

Procedure:

1. Import the Pandas library.
2. Create or read the jobs dataset.
3. Sort the dataset using `sort_values()` with descending order.
4. Display the sorted data.

The screenshot shows a Python IDE with two windows. The left window displays the source code for a Pandas program. The right window shows the output of the program, which is a table of job details sorted by title in descending order.

```
exp3.py - C:/Users/sandr/exp3.py (3.12.10)
File Edit Format Run Options Window Help
import pandas as pd

# Sample Jobs Data
jobs = pd.DataFrame({
    'Job_ID': [1, 2, 3, 4],
    'Job_Title': ['Manager', 'Clerk', 'Analyst', 'Salesman'],
    'Min_Salary': [50000, 20000, 40000, 30000]
})

# Sort by Job Title in descending order
result = jobs.sort_values(by='Job_Title', ascending=False)
print(result)
```

The output window shows the following table:

Job_ID	Job_Title	Min_Salary
3	Salesman	30000
0	Manager	50000
1	Clerk	20000
2	Analyst	40000

Result:

The job details were displayed in descending order of job title.

4. Write a Pandas program to create a line plot of the historical stock prices of Alphabet Inc. between two specific dates.

Aim:

To create a line plot of the historical stock prices of Alphabet Inc. between two specific dates.

Procedure:

1. Import Pandas and Matplotlib libraries.
2. Create or read the stock dataset.
3. Convert the Date column into datetime format.
4. Filter the data between the specified dates.
5. Plot the Closing Price using a line chart.
6. Display the graph.

Result:

The historical stock prices of Alphabet Inc. were displayed successfully as a line plot.
