SET-11

21. Write a Pandas program to swap the cases of a specified character column in a given DataFrame.

The screenshot shows a Python IDE with two windows. The left window, titled 'set11.py - C:/Users/sandr/set11.py (3.12.10)', contains the following code:

```
import pandas as pd

df = pd.DataFrame({
    'Name': ['Sandra', 'John', 'Alice'],
    'City': ['Chennai', 'Mumbai', 'Delhi']
})

df['Name'] = df['Name'].str.swapcase()

print(df)
```

The right window, titled 'IDLE Shell 3.12.10', shows the output of the program after execution:

```
Python 3.12.10 (tags/v3.12.10:0cc8128, Apr 8 2025, 12:21:36) [MSC v.1943 64 bit
(AMD64)] on win32
Enter "help" below or click "Help" above for more information.

>>>
===== RESTART: C:/Users/sandr/set11.py =====
      Name    City
0  sANDRA  Chennai
1   jOHN   Mumbai
2  aLICE    Delhi
>>>
```

The output displays a DataFrame with the 'Name' column swapped to lowercase and the 'City' column unchanged.

22. Write a Python program to draw a line with suitable label in the x axis, y axis and a title.

```
set11.py - C:/Users/sandr/set11.py (3.12.10)
File Edit Format Run Options Window Help
import matplotlib.pyplot as plt

x = [1, 2, 3, 4, 5]
y = [2, 4, 6, 8, 10]

plt.plot(x, y)

plt.xlabel("X Axis")
plt.ylabel("Y Axis")
plt.title("Simple Line Graph")

plt.show()
```
